

Cayman Coral Reefs and Coastal Systems

JAN. 2, 2026- JAN. 9, 2026

Winter 2026 Travelearn

The coral reefs of Little Cayman are arguably the best in the Caribbean for research because they are isolated from continental and overdevelopment and support a biologically diverse marine ecosystem. Through this course, we will work with CCMI to learn about the fish, plant, and coral species of Little Cayman and witness threats to this rich diversity.

Program Highlights

- Snorkeling excursions
- Nature Trail
- National Trust and Museum
- Seahorse Cafe

Information Session

09/25 at 3:30pm in George Hennings 336
