

MASTER OF SCIENCE IN ENVIRONMENTAL MANAGEMENT

Overview

Kean University's new Master of Science (M.S.) in Environmental Management is an interdisciplinary program designed to prepare the next generation of leaders for roles in environmental management, policy development and sustainable practices. Students will learn fundamental project management and administrative skills in tandem with environmental science principles in preparation to lead large-scale projects and manage diverse teams. This program equips students with the practical skills and knowledge necessary to address complex environmental challenges at local, regional and global scales. This flexible master's program allows students in New Jersey and beyond to conduct collaborative research projects or focus on professional practices in a learning format that makes sense for them.

Maximizing Flexibility to Fit Your Schedule

31
Credits

One Year
Accelerated Track

Two Year
Part-Time Track
